

Assignment-7

PROBLEM STATEMENT :

Hosting a website on EC2.

Steps to host a website on EC2->

1. Sign up for an AWS account, search for 'EC2' then click on it.

2. Click on 'Launch instance'.

- Fill up the required details->'Name' and under 'Application and OS Images' select 'ubuntu'.

In key pair(login)', click on 'Create new key pair', give 'key pair name' and create it. Under 'Network Settings' tick on all checkboxes. Launch instance.

4. Instance is created successfully. Then click on 'Instances' .

5. Click on 'Public IPV4 address' & copy it then open 'Bitwise SSH Client

6. In Bitwise SSH Client, paste the 'Public IPV4 address' 7 click on 'Client key Manager'.

7. Under 'Client key manager', if there is any existing key then remove it and click on 'Import', select the created key then again click on 'Import' and then the key is successfully imported.

8. In 'Bitvise SSH Client', under 'Default profile' give the 'Username' as 'ubuntu' then select Global1 from 'Client Key Manager' then click on 'Log in' & 'Accept and save'.

9. In 'Bitvise SSH client', under 'Default profile' click on 'New terminal console' and there run 'pwd' command to check where we are.

```
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

ubuntu@ip-172-31-95-90:~$ pwd
/home/ubuntu
ubuntu@ip-172-31-95-90:~$
```

In terminal console, type the following commands.-> 'sudo apt-get update', 'sudo apt-get upgrade', 'sudo apt-get install nginx'.

```
ubuntu@ip-172-31-95-90:~$ pwd
/home/ubuntu
ubuntu@ip-172-31-95-90:~$ sudo apt-get update

The following additional packages will be installed:
  nginx-common
```

Restarting services...

```
Service restarts being deferred:
/etc/needrestart/restart.d/dbus.service
systemctl restart networkd-dispatcher.service
systemctl restart systemd-logind.service
systemctl restart unattended-upgrades.service
```

No containers need to be restarted.

```
User sessions running outdated binaries:
ubuntu @ session #3: sshd[1044]
ubuntu @ user manager service: systemd[1049]
```

No VM guests are running outdated hypervisor (qemu) binaries on this host.

```
ubuntu@ip-172-31-95-90:~$ nginx -v
Help: the installer does not start
```

10. Check if www folder appears or not by using 'ls' command inside 'var' folder Now to give the file access permissions to it go back to the 'www' directory, and type the command 'sudo chmod 777 html' and press 'Enter'.

```
ubuntu@ip-172-31-95-90:~$ cd ..
ubuntu@ip-172-31-95-90:/home$ cd ..
ubuntu@ip-172-31-95-90:/ $ pwd
/
ubuntu@ip-172-31-95-90:/ $ cd /var/www/html
-bash: cd /var/www/html: No such file or directory
ubuntu@ip-172-31-95-90:/ $ ls
