

Assignment No.: 02

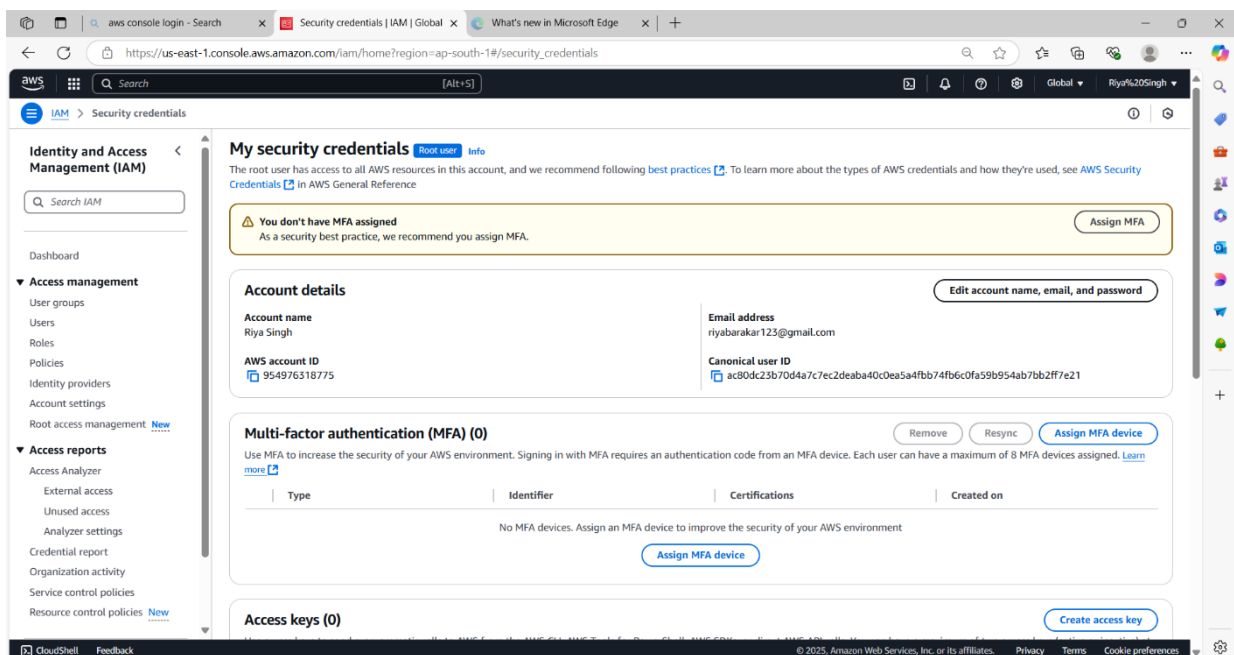

Problem Statement: Create MFA for Authentication.

Solution Process:

1. At first go to security credentials.

2. Then click the Assign MFA option.

3. Give the MFA device name and choose the Authenticator app.

The screenshot shows the AWS IAM console 'Assign MFA device' page, Step 2: Set up device. The page has a sidebar with 'IAM' and 'Security credentials' links. The main content area is titled 'Assign MFA device' and contains two sections: 'MFA device name' and 'MFA device'. The 'MFA device name' section has a text input field with 'Device1' and a note: 'Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , @ _ - (hyphen)'. The 'MFA device' section is titled 'Device options' and lists three options: 'Passkey or security key', 'Authenticator app' (selected with a blue dot), and 'Hardware TOTP token'. The 'Authenticator app' option has a description: 'Authenticate using a code generated by an app installed on your mobile device or computer.'

4. Download the Authenticator app on our mobile.

5. Then scan the QR and Enter the MFA1 code from the Authenticator app.

6. Wait 30 seconds and Enter the MFA2 code from the Authenticator app.

The screenshot shows the AWS IAM console 'Assign MFA device' page, Step 2: Set up device, with the 'Authenticator app' option selected. The page displays three numbered steps: 1. 'Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.' 2. A QR code with the instruction: 'Open your authenticator app, choose Show QR code on this page, then use the app to scan the code. Alternatively, you can type a secret key. Show secret key'. 3. 'Type two consecutive MFA codes below' with two input fields. The first field contains '918066' and the second field contains '751866'. At the bottom, there are 'Cancel', 'Previous', and 'Add MFA' buttons.

7. At last click on the Add MFA option

8. Finally the MFA device is assigned

The screenshot displays the AWS IAM console interface in a web browser. The top navigation bar shows the AWS logo and the path 'IAM > Security credentials'. A green notification banner at the top states 'MFA device assigned' with a close button. Below this, the 'AWS account ID' is 954976318775 and the 'Canonical user ID' is ac80dc23b70d4a7c7ec2deaba40c0ea5a4fbb74fb6c0fa59b954ab7bb2ff7e21. The 'Multi-factor authentication (MFA) (1)' section shows a table with one entry: a virtual MFA device with identifier 'arn:aws:iam::954976318775:mfa/Device1', 'Not Applicable' certifications, and a creation date of 'Wed Feb 19 2025'. The 'Access keys (0)' section shows 'No access keys' and a message advising against long-term credentials. The left sidebar contains navigation links for Identity and Access Management (IAM), Access management, and Access reports. The bottom footer includes the year 2025, Amazon Web Services, Inc. or its affiliates, and links for Privacy, Terms, and Cookie preferences.

MFA device assigned

You can register up to 8 MFA devices of any combination of the currently supported MFA types with your AWS account root and IAM user. With multiple MFA devices, you only need one MFA device to sign in to the AWS console or create a session through the AWS CLI with that user.

AWS account ID
954976318775

Canonical user ID
ac80dc23b70d4a7c7ec2deaba40c0ea5a4fbb74fb6c0fa59b954ab7bb2ff7e21

Multi-factor authentication (MFA) (1)

Use MFA to increase the security of your AWS environment. Signing in with MFA requires an authentication code from an MFA device. Each user can have a maximum of 8 MFA devices assigned. [Learn more](#)

Type	Identifier	Certifications	Created on
☐ Virtual	arn:aws:iam::954976318775:mfa/Device1	Not Applicable	Wed Feb 19 2025

Access keys (0)

Use access keys to send programmatic calls to AWS from the AWS CLI, AWS Tools for PowerShell, AWS SDKs, or direct AWS API calls. You can have a maximum of two access keys (active or inactive) at a time. [Learn more](#)

Access key ID	Created on	Access key last used	Region last used	Service last used	Status
No access keys					

As a best practice, avoid using long-term credentials like access keys. Instead, use tools which provide short term credentials. [Learn more](#)
