

Assignment No.: 03

Problem Statement: Create IAM user and give full access to S3

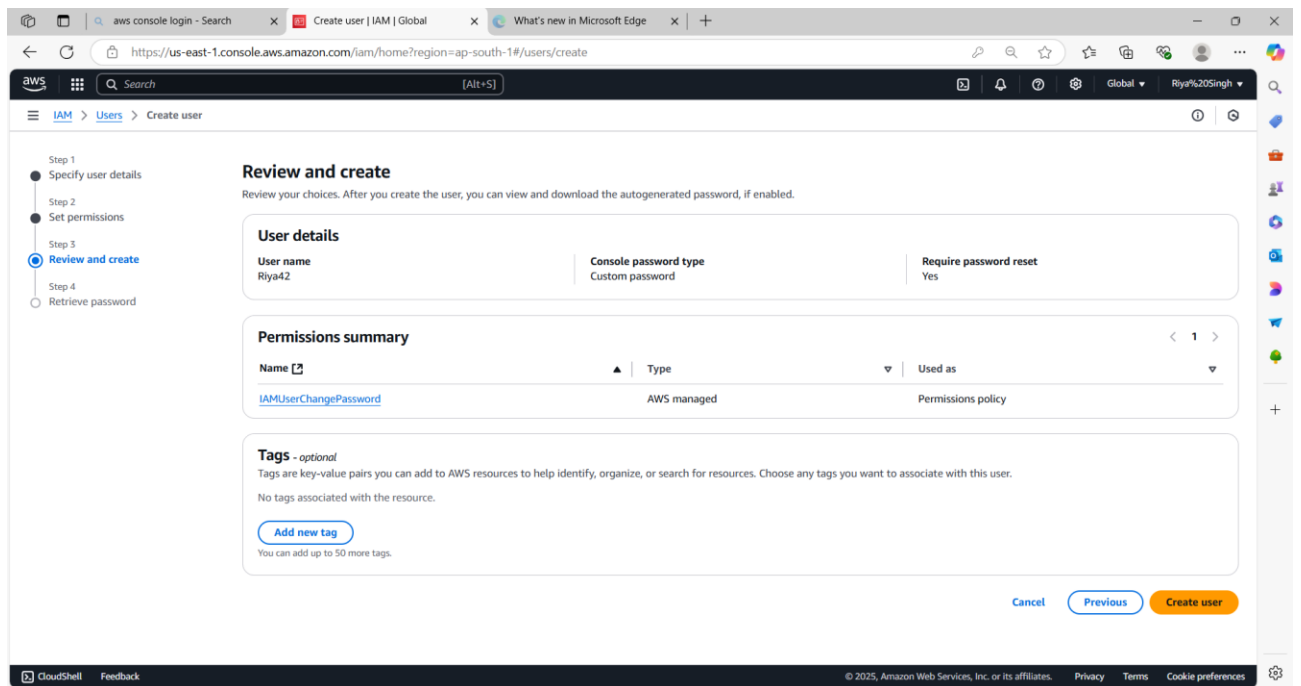

Solution Process:

1. Go to the AWS console and search Identity and Access Management (IAM).
2. Then go to the users option and click the create user.
3. Fill the user details and create a password

The screenshot shows the AWS IAM 'Create user' page in a web browser. The browser tabs include 'aws console login - Search', 'Create user | IAM | Global', and 'What's new in Microsoft Edge'. The address bar shows the URL: `https://us-east-1.console.aws.amazon.com/iam/home?region=ap-south-1#/users/create`. The AWS console header is visible with the 'IAM' menu open and 'Users' selected. The 'Create user' page has a left sidebar with 'Retrieve password' and a main content area. The main content area has a heading 'The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and +, =, @, _ (hyphen)'. Below this is a checkbox 'Provide user access to the AWS Management Console - optional' which is checked. A note says 'If you're providing console access to a person, it's a [best practice](#) to manage their access in IAM Identity Center.' A blue-bordered box contains the 'Are you providing console access to a person?' section with 'User type' options: 'Specify a user in Identity Center - Recommended' (unselected) and 'I want to create an IAM user' (selected). Below this is the 'Console password' section with 'Autogenerated password' (unselected) and 'Custom password' (selected). A password input field is shown with a strength indicator. At the bottom, there are bullet points for password requirements and a 'Show password' checkbox.

4. Click next and set the S3 full access permission.
5. After the review the IAM user details and then click on the create user option.

6. Finally IAM user is created with S3 full Access permission
